Mentor/HOD.

iii Sample Input:

Item	Sale_Value
laptop	1200
Laptop	1500
Tablet	800
Tablet	950
Samphone	500
phone	750

Sample Output:

Item	max Sale Value	min Sale Value
Laptop	1500	1200
Tablet	950	800
phone	750	500

Result:

The Code is executed succesfully and get the Output:

8. Write a pandas program to create a pivot table and find the item wise unit sold (refer Sale_data table)

```python
import pandas as pd

# Load the sales data
sales_data = pd.read_csv("C:/Users/abhip/OneDrive/Documents/DSA05 LAB/sales.csv")

# Create a Pivot table to find the maximum and minimum sales for each item
pivot_table = sales_data.pivot_table(values='Sales', index='Item', aggfunc=['max', 'min'])

# Rename the columns for clarity
pivot_table.columns = ['Max Sales', 'Min Sales']

# Display the Pivot table
print("Pivot Table showing Maximum and Minimum Sales for each item:")
print(pivot_table)
```
